DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 10 is rejected under 35 U.S.C. 102(b) as being anticipated by Miyoshi et al. (US/4,367,720).

3. Miyoshi et al. discloses a method for controlling exhaust gas recirculation in an engine at engine startup comprising turning off the engine, opening a valve that allows exhaust gas into an intake manifold after the engine is turned off. See column 4 line 63 through column 5 line 5. It is inherent that the engine will be restarted sometime after it is turned off.

Allowable Subject Matter

4. Claims 1-9 are allowed.

5. Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Patent 6,659,090 opens EGR after engine is shut down but does

so to purge EGR. Patents 4,387,694 and 6,659,069 add EGR during cranking of engine. JP 8-61157 closes EGR at engine cutoff.
